The Privacy Solar Banded Fabric Roller Shade is made of bands of light filtering polyester that are bonded to PVC coated polyester solar bands in an alternating sequence. The bonded material is attached to the shade mechanism in a loop configuration such that there is a front set of bands and a rear set of bands. By adjusting the alignment of the bands with the cord control, you can filter light as desired. The shade can also be lifted like a standard roller shade to partially or completely clear the window opening.
